SUMMARY

Technology-oriented engineering graduate with hands-on experience in programming, software development, data analysis, and application-based projects. Proficient in Python, Java, SQL, and C, with practical exposure to developing software solutions, processing data, and solving technical problems. Familiar with web technologies, database concepts, RESTful web services, testing, and debugging. Possess strong analytical, problem-solving, and communication skills, with the ability to adapt to new technologies and work effectively in a collaborative team environment.

EDUCATION

B.Tech Computer and Communication Engineering (CGPA: 7.26/10) Aug 2022 – May 2026
Amrita Vishwa Vidyapeetham Chennai

Bachelor of Science in Data Science and Applications Nov 2023 – 2026
Indian Institute of Technology Madras (IIT Madras) Chennai

EXPERIENCE

Research Intern – AI Powered Malware Detection using Deep Learning Jul 2025 – Jul 2026
National Institute of Technology Tiruchirappalli Tiruchirappalli

- Architected a scalable deep learning pipeline for analyzing 20,000+ malware samples across 25 malware families, enabling accurate and efficient malware classification.
- Engineered an automated binary-to-image framework, transforming malware binaries into grayscale images for CNN-based malware classification.
- Designed and optimized a scalable preprocessing pipeline, accelerating model training while improving workflow scalability and computational efficiency.

PROJECTS

AI-Powered Stock Market Intelligence Platform

- Developed an AI-driven stock market education platform integrating real-time data analysis and an interactive chatbot to help users understand and explore market trends intuitively.
- Applied machine learning and data analytics techniques to generate actionable insights, improving user decision-making and financial awareness.
- Led product ideation and MVP development through market research and feature definition, delivering a team-based platform with AI-driven learning capabilities.

Weed identification and classification using machine learning

- Built a patch-wise deep learning model for Sorghum weed detection using 4,000+ field images, with optimized preprocessing and patch-based input handling
- Achieved 91% accuracy and 86% precision, improving model efficiency and spatial understanding through iterative tuning and Transformer-based enhancements

Transformer-Based Potato Leaf Disease Classification

- Evaluated ViT and Swin Transformer models on a 7-class agricultural dataset, applying SMOTE for class balancing and achieving 91.4% accuracy with Swin Transformer.

Mini Project

Networking Fundamentals: Implemented socket programming and basic network simulations in Java to understand data transmission and protocol behavior

SKILLS

Technical Skills

Python, Java, C, SQL, HTML, CSS, JavaScript, RESTful Web Services, RDBMS, Git, Data Structures & Algorithms, Application Development, Debugging, Testing, Data Analysis, Machine Learning, Deep Learning, Computer Vision, TensorFlow, PyTorch.

COURSES

Python Programming Certification 
National Skill Development Corporation (NSDC)
